Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 April 2005.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/22/05 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1 and 6-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Art Unit: 2834

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1 and 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Scheucher (5,731,650) in view of Shiah et al. (5,610,467).

Regarding claim 1, Scheucher shows a motor-fan unit comprising:

- A motor assembly having a shaft (14, Figure 1), a commutator (29) supported on said shaft, and a pair of brushes (31) in electrical contact with said commutator;
- A fan assembly (18) having fan coupled to said shaft;
- An end plate assembly (13) located between said fan and said motor assembly (26), said end plate assembly including a plate portion (48) defining an opening (for bearing 16) through which said shaft passes, wherein said commutator is located near said opening; and
- A pair of brush retainers (33) each having an open end (top, Figure 4) adapted to receive a corresponding one of said brushes, each said brush retainer formed on said plate portion adjacent said commutator, wherein each said brush retainer has a first member (36, Figure 6) extending axially toward said motor (Figure 1), a second member (top surface in Figure 2) extending from said first member and a third member (36, left, Figure 6) extending axially toward said fan assembly from said second member,

Scheucher does not show each said brush retainer having a gap between said third member and said end plate.

Shiah et al. shows each said brush retainer (35) having a gap (Figure 2 and 3) between said third member and said end plate (31) for the purpose allowing the spring to advance into the brush retainers.

Since Scheucher and Shiah et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to form a gap between the side wall of the brush retainer with the end plate as taught by Shiah et al. for the purpose discussed above.

Regarding claim 6, it is noted that Scheucher also shows the support member (bolt for mounting).

Regarding claims 7 and 8, it is noted that Shiah et al. also shows the spring (50) in the spring holder (32).

Regarding claims 9 and 10, it is noted that Scheucher also shows the second projection (54).
